# Project 4 (Kashta website)

Screenshot/Logo :

Kashta List page**:**

Booking page :

App's name:

Kashta website.
The Kashta website allows users to create an account as either a site administrator or a customer. The site administrator can create, edit, and delete kashtas, while customers can browse the list of kashtas and book a kashta.

Getting started:

Link to the planning materials:

"C:\Users\Asus\code\ga\projects\Family-Tree_Frontend\src\assets\family tree ERD.jpeg"

Link to the back-end repository : (https://github.com/Abeersharif111/preoject4-kashta-Backend.git)

Link to the front-end repository :(https://github.com/Abeersharif111/project-4-Kashat-frontend.git)

Technologies used:

- JavaScript.
- HTML.
- CSS .
- JSC.
- JSX
- JSON

- Python

Next steps:

Planned future enhancements :

- Linking the system with email to verify the payment and booking process, and adding a payment feature to confirm the booking.
- Finalize the packages component such as lunch meals, dinner meals, ice cream, or beverages, with specific prices calculated for these packages.

- Displaying kashtas under winter, summer, and other categories.
- Adding videos and a multiple-images feature for each kashta.
- Adding customer notes and preferences.
